

```
from swarm_models import GPT4VisionAPI

# Initialize with default API key and custom max_tokens

api = GPT4VisionAPI(max_tokens=1000)

# Define the task and image URL

task = "Describe the scene in the image."

img = (
    "/home/kye/.swarms/swarms/examples/Screenshot from 2024-02-20"
    " 05-55-34.png"
)

# Run the GPT-4 Vision model

response = api.run(task, img)

# Print the model's response

print(response)
```
