```python
from swarm_models import OpenAIChat

import os

# Get the OpenAI API key from the environment variable

api_key = os.getenv("OPENAI_API_KEY")

# Create an instance of the OpenAIChat class

model = OpenAIChat(openai_api_key=api_key, model_name="gpt-4o-mini")

# Query the model with a question

out = model(

    "What is the best state to register a business in the US for the least amount of taxes?"

)

# Print the model's response

print(out)
```
