```python
from swarms import Agent, OpenAIChat, SequentialWorkflow

# Example usage
llm = OpenAIChat(

    temperature=0.5,

    max_tokens=3000,

)

# Initialize the Agent with the language agent
agent1 = Agent(

    agent_name="John the writer",

    llm=llm,

    max_loops=1,

    dashboard=False,

)

# Create another Agent for a different task
agent2 = Agent("Summarizer", llm=llm, max_loops=1, dashboard=False)

# Create the workflow
workflow = SequentialWorkflow(

    name="Blog Generation Workflow",

    description=(

        "Generate a youtube transcript on how to deploy agents into"
```

```python
        " production"
    ),
    max_loops=1,
    autosave=True,
    dashboard=False,
    agents=[agent1, agent2],
)

# Run the workflow
workflow.run()
```
